Certificate for socially useful activities in the field of IT education

MAKSIM OMEL'CHENKO

Mobile Developer

Kotlin | Java | KMP/KMM | Android | iOS

EDUCATION

Rostov State University of Civil Engineering

Master's degree, Engineering (June 2008 - July 2013)

EXPERIENCE

MTS Bank - Android Developer

March 2023 — Present

Moscow | remote | full-time

<https://www.mtsbank.ru>

As an Android Developer at MTS Bank, I've been involved in enhancing the development and maintenance of our mobile applications with a focus on practicality and efficiency. My contributions include:

- Feature Development: Architected and implemented a plugin for generating new features, streamlining the development process for product teams. This tool enables rapid, consistent MVI-based feature integration within our Dagger architecture, substantially reducing time spent on code reviews and feature deployments.
- Code Optimization: Updated our dependency injection framework from a service locator model to Dagger, improving the application's stability and reducing build times, decreasing from 15 to 12 minutes.
- Collaborative Support: Assisted in the integration and adaptation of Android developers from different teams, ensuring they could effectively contribute to our projects.
- Recruitment Support: Participated in the hiring process to select and bring in skilled Android developers, contributing to our team's growth and expertise.

Yandex Practicum - Kotlin & Android Tutor

November 2022 — December 2023 (1 year 2 months)

Moscow | remote | part-time

<https://practicum.yandex.ru>

In my role at Yandex as a Kotlin and Android tutor, I contributed to the education of aspiring developers by simplifying and conveying complex programming concepts. My responsibilities included:

- Curriculum Development: Assisted in the creation and delivery of detailed online lessons and webinars, focusing on key aspects of Kotlin and Android development.
- Supportive Tutoring: Provided support and guidance through interactive lesson plans, aiming to clarify challenging topics and foster understanding.
- Assessment and Feedback: Offered constructive feedback based on student performance, helping them progress and overcome learning hurdles.
- On-demand Assistance: Was available for real-time inquiries, aiming to demystify topics related to software architecture and design patterns.

Andersen Lab - Android Developer

August 2020 - March 2023 (2 years 8 months)

Minsk | remote | full-time

<https://people.andersenlab.com>

In my capacity at Andersen Lab, I was involved in the development of mobile applications for prominent banks such as [Sberbank](#) and [VTB](#).

My responsibilities included:

- Architectural Patterns Application: Utilized patterns like MVVM, MVP, and MVI to ensure app reliability and maintainability.
- Database Technology Utilization: Worked with Room, Firebase, and Realm to optimize data handling.
- Reactive Programming Integration: Employed LiveData, Flow, and RxJava for reactive app features.
- Concurrency Management: Applied Kotlin Coroutines and WorkManager for efficient task management.
- Data and View Binding Implementation: Used binding techniques for improved app UI and data interactions.
- Dependency Injection Enhancement: Implemented Hilt and Dagger 2 for better dependency management.

a1qa - QA Automation Engineer (Java)

January 2018 - July 2020 (2 years 7 months)

Minsk | remote | part-time

<https://www.a1qa.com>

In my role as a QA Automation Engineer at a1qa, I focused on upholding software quality through methodical testing and collaboration.

My contributions included:

- Functional and UI Testing: Performed thorough testing to ensure user interfaces were intuitive and functional, enhancing user satisfaction.
- Test Case Development: Created detailed test cases using Selenium WebDriver to meet precise business specifications.
- Defect Tracking: Utilized Jira to diligently track and report issues, facilitating swift and effective resolutions.
- Team Collaboration: Engaged in regular stand-up and planning meetings, contributing to the alignment of project objectives and timelines.
- Cross-functional Cooperation: Worked alongside Product Managers and developers, providing essential QA insights and fostering a cohesive team environment.

POLYUS - System Administrator

March 2017 - July 2020 (3 years 5 months)

Krasnoyarsk | onsite | full-time

<https://polyus.com>

In my tenure as a System Administrator at POLYUS, I dedicated my efforts to ensuring the steadfast performance and security of our systems.

My role encompassed:

- Troubleshooting and Coordination: Addressed system issues through effective troubleshooting and collaborated with external parties for swift resolutions.
- System Improvement: Took initiative in identifying and implementing enhancements to bolster system reliability and performance.
- Security Oversight: Administered security protocols to protect against unauthorized access and threats, maintaining system integrity.
- Proactive Monitoring: Consistently monitored and assessed the system's security stance to preemptively identify and rectify potential vulnerabilities.
- Technical Support: Provided in-depth support and analysis for system-related inquiries, ensuring thorough understanding and issue resolution.
- Documentation Management: Kept meticulous records of system configurations, updates, and operational procedures, aiding in clarity and consistency.

SKILLS

Programming Languages:

- Kotlin (5 years of experience)
- Java (6 years of experience)

Platforms:

- Android development experience spanning 4 years
- Learning iOS development just for fun 😊
- Engaged in learning and applying Kotlin Multiplatform for 2 years
- Proficient in using Gradle for build automation and DSL

Platform Technologies:

- Applied MVVM and MVI architectures in various projects
- Utilized databases such as Room, Firebase, and Realm
- Experienced in Reactive Programming with LiveData, Flow, and RxJava
- Skilled in managing concurrency in Kotlin with Coroutines and WorkManager
- Gained 2 years of experience in Jetpack Compose for modern UI development
- In-depth experience with XML, Data Binding, and View Binding for efficient UI coding and management
- Skilled in leveraging various Jetpack Libraries to enhance app robustness and maintainability
- Proficient with dependency injection using Dagger for 5 years and Koin for 2 years

Environment Technologies:

- Utilized Bitbucket, GitLab, and Jira for 3, 4, and 5 years respectively
- Experienced in code quality and CI/CD processes with SonarQube (3 years), Fastlane (2 years), and Jenkins (3 years)

Testing:

Conducted Unit and Integration Testing using JUnit, Mockito, and Mockk

Tools:

Regular use of Postman and Charles for API testing and debugging
